

VitaCoreX LLC - Healthcare CFO Brief

Revenue protection and recovery infrastructure for healthcare operators and recurring-payment businesses. Tampa, Florida - Operating nationwide - 2025

Executive summary

This brief frames recovery work as an operating discipline rather than a generic collections problem. The relevant levers are intake completeness, documentation thresholds, escalation logic, and filing-ready handoff when outside escalation becomes necessary.

Pilot economics snapshot

Metric	Base state	Pilot target
Documentation completeness	Fragmented / ad hoc	Standardized intake package
Collection leakage	High variability	Lower avoidable leakage
Counsel handoff quality	Inconsistent	Filing-ready packet
Executive reporting	Limited visibility	Traceable workflow state

Control hierarchy

Intake and documentation controls usually matter more than late-stage cleanup. A disciplined pre-collection layer creates cleaner management visibility and more defensible downstream escalation.

Layer	Relative control value
Intake standard	High
Documentation threshold	Medium-High
Escalation logic	Medium
Counsel handoff	Critical

Use case fit

Best aligned with medical practices, outpatient groups, dental groups / DSO environments, gyms or memberships, and subscription or card-on-file businesses that need tighter documentation discipline before escalation.
